

## ABOUT VISIA™... THE LATEST ADVANCEMENT IN SKIN IMAGING

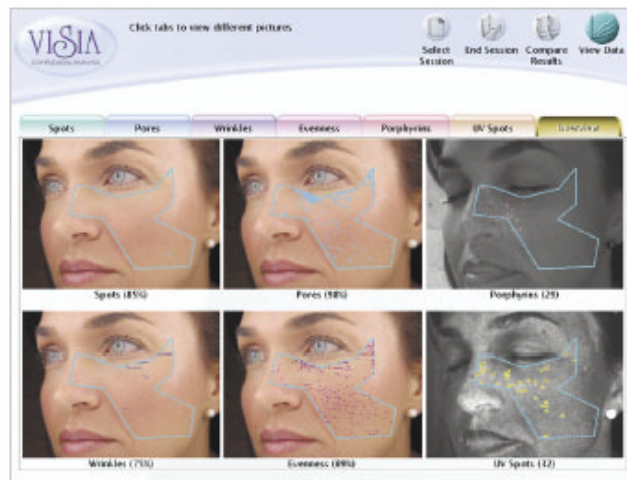

The VISIA™ complexion analysis system allows Dr. Harvey and Staff to directly visualize the state of your skin's condition using standard and UV photography. The images generated are very detailed and stored in digital format. VISIA™ allows our staff to evaluate six things: **wrinkles, spots, pores, skin texture, UV spots**, and chemicals called **porphyrins**, which can indirectly be a measure of your overall acne risk.

**Figure 1.** *The VISIA™ Imaging System*

After compiling the data, you will be given a percentile score or a number score. The percentile score will tell you where your skin stands in relation to others in your age group. The number score will help us to prescribe a personalized dermatologist supervised skin care plan, which can involve the use of state of the art skin care products and cosmetic rejuvenation procedures.

VISIA™ is just one example of how we at Ponte Vedra Dermatology and Aesthetic Surgery strive to provide our patients with the latest technological skin care advancements.

The VISIA Overview Screen provides a visual summary of the six facial features measured by the system.

Call **904-285-7546** today to get your own personalized VISIA™ complexion analysis and learn about the many ways that you can achieve "*Healthy Skin.. and more!*"
